EWK PRO10+

FOR PROFESSIONALS

-  Invasive plant control
-  Weed control
-  Deep cleaning
-  Drain opening
-  Ice-melting
-  Pressure washing
-  Watering

No pesticides.
Only 100 °C water.

PRO10+ is our smallest multifunctional hot water device and is equipped with a Kubota diesel engine, providing plenty of power and operating time. In the updated PRO10+ model, hot water production has increased by approximately 40%, significantly improving the cost-efficiency of treatment work. This compact machine is an excellent fit for installation in a one-ton class van, trailer, property maintenance machine, etc.

EWK PRO10+

Power supply:	Kubota diesel engine 9,3 kW
Power:	1 x Diesel fuel heater 105 kW
Maximum pressure:	150 bar
Output (water):	Weed control, approx. 14 l/min (99–101 °C)
Fuel consumption:	Appr. 7 l/h
Dimensions (L x W x H):	1400 x 970 x 1200 mm
Weight:	Empty: 460 kg Full (water and fuel): 950 kg
Fuel capacity:	45 l
Water tank capacity:	400 l, additional tank as an option
Hose reel:	80 m outlet hose

EWK PRO10+

FOR PROFESSIONALS

On the PRO10+ device, water heating is performed by a 105 kW industrial heater. The water heater's efficiency is extremely high, exceeding 95%, and it produces 100°C water at approximately 14 litres per minute. This output is more than sufficient for weed control, general high-pressure washing, small drain-opening tasks, and thawing applications.

The device can be connected to a property maintenance machine, tractor, or van. This makes it possible to carry large amounts of water, enabling efficient work without wasting time fetching water. Almost any existing tank can be used as an additional water tank. The best treatment results are achieved when the water is applied manually; nothing can replace the human ability to observe and assess the situation in this type of work. Different nozzle options are available as accessories. The treatment hose is 80 meters long, providing more than enough reach for most applications.

In addition to weed control, the device can be used for pressure washing, thawing, drain opening/thawing, and graffiti removal. An ozone water unit is also available as an optional accessory, enabling odour removal and deep cleaning in various environments.

The PRO10+ is a compact and powerful solution for comprehensive maintenance of the built environment.

What is Eco Weedkiller ?

All our devices use 100 °C water as the active treatment agent. The effect of hot water in weed control is based on a sudden increase in thermal energy, which destroys the plant's cellular structure. Most plants naturally have mechanisms that protect them from threats such as forest fires. Hot water, however, is not a natural threat to plants, so they have not evolved mechanisms to protect themselves against it. In addition to weed control, the PRO series' additional functions enable hot water use for a wide range of property maintenance applications.

SAFE

Eco Weedkiller on ympäristöystävällinen, eikä vaurioita pintoja.

EFFECTIVE

Kuuma vesi tehoaa niin rikkakasvien juuriin kuin likaan.

WATER-BASED

Myrkytön vaihtoehto - pelkkä puhdas vesi vaikuttavana aineena.

BUILT TO LAST

Helppo huoltaa ja varaosia on saatavilla.

EASY TO USE

Ei vaadi erityisosaamista, lupia tai lisenssejä.

DESIGNED IN FINLAND

Opiskelijoiden ja asiantuntijoiden yhteistyöllä.

HOW DOES ECO WEEDKILLER WORK?

1
Fill the device with normal tap water.

2
Wait for the water to heat up to 100°C.

3
Apply hot water to unwanted plants.

4
Remove dead plants if needed.

5
Repeat 3-4 times a year to destroy root systems.
